Table of Contents

Letters included: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, [

A

Access Level

No definition provided. This term needs a definition.

Accordion

Expandable/collapsible content container.

ACS Data Collection

The new name for Launch.

Action Type

No definition provided. This term needs a definition.

ActionBar

Row of context-aware buttons (e.g. Save, Edit, Delete).

B

Backfill

No definition provided. This term needs a definition.

Bar Chart

No definition provided. This term needs a definition.

Binding Dimension

In a connection, the component that is used to join datasets together. It is selected when creating a connection between datasets.

Binding dimensions

use to be called merchie evars!

Breadcrumbs

Navigation path shown at the top of a page.

C

Calculated Metric

No definition provided. This term needs a definition.

Callout

Highlighted box showing tips or warnings.

Channel Surfaces

Ø=Ý' Channel Surface Configuration Includes : Channel Type – Email, Push, SMS (via custom action), Webhook, etc. Sender Name – Display name that appears in the recipient's inbox (e.g., "Adobe Store"). Sender Email Address (From) – Email address used to send the message (e.g., noreply@yourbrand.com)....

Checkbox

Allows users to select one or more items from a set.

Chiclet

Small box element showing applied filters or segments.

D

Data center region eg. VA7

What is VA7 ? VA = Virginia , USA (East Coast) 7 = Adobe's internal designation for a specific data center cluster Common in North American tenants of Adobe Experience Platform (AEP) , RTCDP , AJO , CJA , etc. Why does it matter? It affects data residency , latency , and endpoint URLs Example: Re...

Data clean room

A secure environment allowing participants to use data assets with strict access controls for agreed uses.

Data collaboration

Combining and analyzing data within a company or with partners for targeting, measurement, and insights.

Data connection

The source from where data is imported into RT-CDP Collaboration; currently, only Experience Platform is supported.

Data sharing agreement

A contract outlining terms and conditions for data sharing between parties.

E

Edge Caching

A method of storing data or content closer to the user by using geographically distributed servers. In Adobe Experience Platform, edge caching helps reduce latency by serving data such as profiles, decisions, and consent flags from nearby edge nodes. Adobe Experience Platform (AEP) Stores profile fr...

Edge Configuration

Settings that determine how data is processed at the edge network for real-time personalization.

Edge Segmentation

No definition provided. This term needs a definition.

Edge Segmentation Readiness

#ñp Timeline for Edge Segmentation Readiness: ' ~1 hour – Audience definitions become available at the edge 'L Not immediate – They are not usable for edge segmentation instantly upon creation 'L Not 24 hours or a week – Longer timeframes apply to batch segmentation or full profile merges, not edge log...

Effective Marketing

Armed with this knowledge, you can create more meaningful, relevant, and effective marketing campaigns.

F

Fallout Analysis

No definition provided. This term needs a definition.

Federated Audience Composition

Ø>Ýp Federated Audience — Full Definition for Dictionary Definition: A Federated Audience in Adobe Experience Platform (AEP) is an audience segment created and managed in an external system (e.g., Adobe Audience Manager or a partner CDP), and shared into AEP for targeting and activation — without dupl...

Field Groups

Field Groups (formerly Mixins) Ø>Ýñ Reusable sets of XDM fields used to extend schemas in .0Adobe Experience Platform.0 What Is It? .0Field Groups.0 are modular groups of pre-defined fields used to build or extend .0XDM Schemas.0. They were previously called Mixins but renamed for clarity. Use Case: Schema ...

Field-Level Access

No definition provided. This term needs a definition.

Filter

Previously called segments in Adobe Analytics. A subset of your data created by defining rules and specific criteria. For example, you might create a filter for "customers from California who viewed more than 5 pages".

GDPR

GDPR (General Data Protection Regulation) is a comprehensive data privacy law enforced by the European Union that governs how organisations collect, store, process, and share personal data of individuals in the EU. It emphasises user consent, data transparency, and the right to access or delete one's...

Golden Profiles

CJA creates what we call 'golden profiles.' These profiles combine physical and digital data from various sources. '(What's "Golden" About It? ' Deduplicated: Combines IDs across devices and channels ' Unified: Merges data from CRM, POS, web, mobile, etc. ' Real-time: Continuously updated with new e...

Guardrails

Adobe Experience Platform uses three tiers of compute resources to evaluate data and power segmentation, activations, and journeys. Each tier varies in performance and operational constraints ("guardrails"): 1. Edge (Fastest, Most Constrained) Runs in near real-time on Adobe Edge nodes. Used for ins...

H

Haptics

Vibration alerts on smartphone or Smartwatch

Healthcare Shield

HIPAA stands for the Health Insurance Portability and Accountability Act — a U.S. law that sets national standards for the protection of patients' health information (PHI). Any system handling PHI must meet strict privacy, security, and breach notification requirements under HIPAA....

High-Frequency Triggering

High-Frequency Triggering means that events are triggered very often and individually , often in response to user actions — such as: Clicking a button Opening an email Viewing a page Logging in In the context of Adobe Journey Optimizer (AJO), it applies to unitary events , which are designed to hand...

ho chi minh city (HCMC)

is the new name

Identity Keys

In Adobe Experience Platform, identity keys are unique identifiers like ECID , Email , Phone , or Loyalty ID that link data across systems. These are stored in namespaces and used for identity stitching, profile merging, and privacy lookups. Profile attributes , on the other hand, are descriptive va...

Identity Map

The .0 identityMap .0 is a structured object in .0 XDM .0 that holds all known identities (e.g., email, ECID, CRM ID) about a profile. It supports multi-namespace identity resolution , powering .0 RTCDP .0 and .0 CJA .0 stitching logic. Format: json Copy Edit

```
"identityMap": { "email": [{ "id": "user@example..."
```

Ingestion Errors

Ingestion errors in .0Adobe Experience Platform.0 refer to failures that occur when data is brought into the system via batch or streaming methods. These errors are flagged by validation services like .0DCVS.0 (Data Validation Control Service) or surfaced as .0INGEST.0 errors in API responses. They indica...

Insights and Personalization

These unified profiles allow you to mine insights. You can understand customer behavior, preferences, and pain points.

Invite

A request sent to a user or organization to join a project or data collaboration.

J

JO

Journey Optimiser aka AJO

Journey Canvas / Designer

What It Is Drag-and-drop UI in the AJO designer Controls logic, timing, branching, and activation Core of all real-time orchestration in AJO Components Start : triggered by unitary events, business events, or audience qualification Conditions : checks profile attributes, segment membersh...

Journey Conditions

Conditions act as gates that control journey flow. If not met, the customer exits — no further steps occur. What Are Conditions? Conditions in Adobe Journey Optimizer (AJO) are logic checks placed after triggers or decision points. They evaluate data from the profile, event, or context to de...

Journey Orchestration

No definition provided. This term needs a definition.

Journey Step

No definition provided. This term needs a definition.

Konductor

Konductor is Adobe's internal name for the orchestration engine that powers the Unified Edge. It handles requests coming from Web SDK (Alloy.js) and coordinates services such as identity resolution, consent enforcement, decisioning, and data collection. Konductor runs on Adobe's global edge network ...

L

Launch

The renamed Tag Management System (TMS) purchased from Search Discovery Satellite

LaunchDarkly

Firewall Impact on Feature Flags Ø=ÞÑ Blocking app.launchdarkly.com can prevent visibility of new Adobe features What Is It? .0Adobe Experience Platform.0 and related tools use .0LaunchDarkly.0 to manage .0feature flags.0 — toggles that control visibility of new UI and backend features per user or org. Use ...

Left Rail

In most Adobe Experience Cloud products (like Customer Journey Analytics, Adobe Analytics, RTCDP, and AEP), the left rail is the vertical navigation panel on the left side of the interface.

Legacy Launch

The previous name for Adobe Experience Platform Data Collection before rebranding.

Line Chart

No definition provided. This term needs a definition.

M

Match keys

Unique identifiers used to link records across datasets for integration and analysis.

Merchandising eVars

An Adobe merchandising eVar is a type of eVar (conversion variable) in Adobe Analytics that allows binding of values to specific products in the product string. It's used when you want to track attributes at the product level, like internal campaign ID, promo code, or product colour, and correlate t...

Merge Policy

A merge policy in Adobe Experience Platform defines how data from different sources is combined to create a single, unified customer profile . Ø=ÜÊ Since a person may interact with your brand via CRM, websites, mobile apps, or call centres, each system might have different or even conflicting values

Metric

A quantitative measurement of key data points. In CJA, metrics allow you to view measurements, such as page views, visits, orders, or revenue.

Missing Data

No definition provided. This term needs a definition.

N

No value

Previously 'unspecified'

Non Stitch Merge Policy

A non-stitch merge policy is a special kind of merge policy in Adobe Experience Platform where identity stitching is disabled — meaning: $\emptyset = \dot{Y}$ No identity graph is used to combine data across different identities. $\emptyset = \ddot{U}$; What It Does Treats each identity (e.g. ECID, email, CRM ID) as a separate profile . E...

Offer Decisioning

A capability that delivers the best offer and experience to your customers across all touchpoints at the right time.

Offer Eligibility

No definition provided. This term needs a definition.

Offer Ranking

No definition provided. This term needs a definition.

Orchestration Flow

No definition provided. This term needs a definition.

Overlap

Common audience segments between datasets used to identify collaboration opportunities.

P

Panel

No definition provided. This term needs a definition.

Parquet

Parquet and AEP's Data Architecture ¶ AEP stores data as Parquet files, not in relational databases ¶ Queries run over a flat, distributed data lake using schema-on-read ¶ What Is Parquet in AEP? Apache Parquet is a columnar file format optimised for analytical workloads. In Adobe Experience Plat...

Participation

No definition provided. This term needs a definition.

Participation Metric

No definition provided. This term needs a definition.

Pathing

No definition provided. This term needs a definition.

Query Service Notebooks

Interactive environment for querying and visualizing data using SQL within Adobe Experience Platform.

Quick Actions

Mini-buttons surfaced directly in tables or cards.

Quick Segments

Quick Segments — Highlights Created in-line from a table/panel (no need to open Segment Builder) Originally supported Event-level logic (can't switch to Person or Session level), but now expanded to all 3 scopes in both AA and CJA. & p Temporary by default unless saved Great for on-the-fly filteri...

R

Rail

Fixed panel on the side of the screen, used for navigation or filters.

Real-time Event

No definition provided. This term needs a definition.

Response Tracking

No definition provided. This term needs a definition.

Retention Analysis

No definition provided. This term needs a definition.

Rolling Calculations

No definition provided. This term needs a definition.

S

saigon

this is the text for saigon

Sandbox

You usally get 5, make sure you reserve one for ucp You can buy more in packs of 5.

Scatter Plot

No definition provided. This term needs a definition.

Scheduled Projects

No definition provided. This term needs a definition.

Schema

The structure and definition of a dataset. It outlines the fields, their types, and how they relate to each other.

T

Table

No definition provided. This term needs a definition.

Tabs

Organizes content into multiple views with a tabbed interface.

Tag

No definition provided. This term needs a definition.

Tag Field

Input field where typed items turn into tags or tokens.

Temporary contextual data

test

U

Unexpected Metric

No definition provided. This term needs a definition.

Unified Profile

No definition provided. This term needs a definition.

Unitary Event

Unitary events are a key AJO concept. Event Types in Adobe Journey Optimizer (AJO) & Unitary = real-time, person-level triggers < Business = system-level triggers, indirect targeting > Unitary Events Unitary events are person-level, real-time triggers like clicks or purchases, using the XDM Experi...

Unpopulated Fields

No definition provided. This term needs a definition.

Use case

A specific scenario that RT-CDP Collaboration can address, like audience discovery or campaign measurement.

Venn Diagram

No definition provided. This term needs a definition.

Visitor ID Service

Legacy term for the Adobe Experience Cloud Identity Service that manages cross-solution identity.

W

Waffle

The nine-dot menu option at the top.

Webhook

In the context of AJO Simulations , Ø>Ýà Why Use a Webhook in This Case? When email isn't fully configured in Adobe Journey Optimizer (e.g. no IP pool, no sender address, or no channel surface), using a Webhook action is a common workaround to: Simulate a journey response Validate journey flow logic P...

Workspace

No definition provided. This term needs a definition.

Workspace Project

A canvas in Analysis Workspace where you build analyses using data from your data views. Contains multiple panels and visualizations that help you make data-driven decisions.

XDM

No definition provided. This term needs a definition.

[XDM Experience] Classes

In Adobe Experience Platform, a class defines the foundational structure and purpose of a dataset schema. It determines whether the data is a long-lived record (e.g., XDM Individual Profile) or a time-based event (e.g., XDM ExperienceEvent). Classes are part of the XDM specification and govern how...
